Lefroy Valley
QUALITY SEEDS

Class	Variety	Description
Basil	DEVOTION 	<p>Genovese-type basil for potted plant production and fresh market; uniform, upright growth and dome or cup-shaped leaf. Has shown very good intermediate resistance to downy mildew in Australia.</p> <p>IR: Pb Grower Signed Agreement (GSA) required.</p>
Basil	LARGE SWEET	<p>Large Sweet is a basil with a typical Genovese spoon shape leaf. It has medium dark, glossy green leaves, and a strong sweet aroma. Use Large Sweet for bunching, fresh pack and salad mixes, harvesting year round.</p>
Basil	MAJESTIC F1	<p>Majestic is a hybrid basil with a typical Genovese spoon shape leaf. It has a strong, well balanced plant with short internodes. With dark, glossy green leaves, and a strong sweet aroma, Majestic can be used for bunching, fresh pack and salad mixes, harvesting during the warmer to cool production slots. IR to Fob</p>
Basil	OBSESSION 	<p>Sweet basil for potted plant production, in greenhouse; vigorous growth, high leaf-to-stem ratio, dark green color. HR: Fob IR: Pb Grower Signed Agreement (GSA) required.</p>
Chervil	CHERVIL	<p>Chervil is an annual herb with a bright green fern shaped leaf. It has a strong sweet aromatic spicy taste, and is suitable for bunching and salad mixes. Chervil is best grown in mild climates and in semi shade.</p>
Chives	CHIVES	<p>Chives are a perennial herb with blue green leaves. They have a mild fresh onion flavour, and are suitable for bunching and salad mixes. Chives can be grown year round.</p>
Coriander	CRUISER	<p>High yielding coriander line with good quality. Cruiser has exceptional bolting tolerance, a dark green colour and strong aromatic flavour. Cruiser is suited to the fresh bunching market for year round harvest.</p> <p>Plant Breeder's Rights Act 1994. PBR 2016/090 'CRUISER'</p>
Coriander	LEFROY'S SANTO MONOGERM	<p>Lefroy's Santo Monogerm coriander is an annual herb in a mono germ form, with bright green leaves. It has a highly aromatic flavour, and is suitable for bunching and salad mixes. Lefroy's Santo Monogerm coriander is best harvested in spring through to autumn.</p>
Dill	DILL	<p>Dill is a perennial herb with feathery blue green leaves. High quality line with improved yield and colour. It has a pungent, aromatic flavour, and is suitable for fresh bunching when harvested at about 40cm, or can be sold in pots. Dill can be grown year round for baby leaf production.</p>
Parsley	HERCULES	<p>Titan type of parsley, with large flat-leaves with a glossy dark green colour. It has an erect habit and is more flavorful than regular plain-leaf types. This variety is used for fresh market bunching, processing and home garden.</p>

Class	Variety	Description
Sage	SAGE	Sage is a perennial herb with grey green velvety leaves. It has a highly aromatic flavour, and is suitable for bagging or drying. Sage can be grown year round.
Sorrel	RED VEINED SORREL	Red Veined Sorrel is a particularly attractive perennial herb with red stems and strongly defined red veins which contrast sharply with bright green leaves. The young leaves have a sharp and tangy dry flavour. Red Sorrel is best suited to glass or poly tunnel production.
Watercress	WATERCRESS	Watercress is a perennial semi-aquatic plant with creeping, hollow, fleshy, square stems growing 30 - 50cm in length, with many side stems of lush green, oblong ovate leaves. It has a peppery tangy flavour, and is suitable for fresh packs and salad mixes. Watercress can be grown year round.
Rocket	BREAKAWAY	Breakaway is a fast growing, indented rocket with good erectness, excellent leaf thickness and a medium to dark green colour. This variety has an improved colour and shelf life. Its flavour is milder than European wild rocket, but is very similar to Speedy Wild rocket. Breakaway is suited to all year round production in Tasmania, Queensland and Western Australia. Victoria mainly use Breakaway in mid winter production.
Rocket	PRIMUS	Primus is a slow bolting form of rocket with a large lobed, bright, medium dark green leaf. Primus has a mild spicy aroma and a thicker leaf texture than Lefroy Valley's standard Rocket. Primus is ideal for the baby leaf market, adding a new dimension to salad mixes, and is suited to year round production.
Rocket (European Wild)	ADAGIO	Adagio is a slower maturing selection of European wild rocket with a heavily serrated, dark green, thick leaf. It has shown excellent bolting tolerance. It has a pungent spicy aroma, an erect growth habit and is ideally suited to summer to autumn production. Adagio is ideal for the baby leaf market, harvesting summer to late autumn.
Rocket (European Wild)	LENTO	Lento is a uniform vigour European Wild Rocket with a slightly broader leaf style. Colour is dark green. Lento is suited to direct sowing and the transplant market, and has shown good durability and shelf life.
Rocket (European Wild)	OBERON 	Wild rocket with dark green highly indented leaves. High leaf number means yields are excellent. Bolting tolerance is exceptional for summer production.
Rocket (European Wild)	PRONTO 2	Pronto 2 is a fast growing form of European wild rocket with a heavily serrated, dark green leaf. It has a pungent spicy aroma, an erect growth habit and is ideally suited to winter production. Pronto 2 is ideal for the baby leaf market, adding a new dimension to salad mixes, and is suited to harvesting in the autumn through to early winter.

DISEASE KEY DEFINITIONS

HR: Highly resistant plant varieties would highly restrict the growth and development of the specified pest or pathogen under normal growing conditions and pest pressure when compared to susceptible varieties. These plant varieties may, however, exhibit some symptoms or damage under heavy pest pressure or stressful growing conditions.

IR: Intermediately resistant plant varieties would restrict the growth and development of the specified pest or pathogen. The plant variety may however exhibit a greater range or degree of symptoms when compared to a highly resistant variety. Intermediately resistant plant varieties will still show less severe symptoms or disease damage than susceptible plant varieties when the crop is grown under similar environmental conditions and is subjected to the same disease or pest pressure.
