Lefroy Valley
QUALITY SEEDS

Class	Variety	Description
Button	PINWHEEL F1 	Pinwheel is a yellow button squash with the “precocious yellow” gene, which shows a typical yellow peduncle and blossom end. The scalloped shape is held as the fruit grow larger. IR: ZYMV
Button	MORNING STAR F1 	Morning Star is a robust high yielding variety with a very strong plant and a sprawling habit. Although this variety does not have genetic virus resistance, the vigour of the plant allows for extended harvest. Fruit are an attractive yellow button with deep scalloped edges, a small blossom end scar and limited green. Uniform shapes are maintained throughout the harvest period.

Pinwheel F1

Morning Star F1

squash

Class	Variety	Description
Gem	ZULU ^{F1}	Zulu is a hybrid gemsquash, fully mature 65 days after sowing, with a compact vine. Fruit are initially oval, but mature fully to a globe shape, when they are 8 x 9cm in size. Flesh is creamy yellow, skin is a very dark green.
Spaghetti	VEGESGETTI ^{F1}	Vegesgetti is a hybrid spaghetti squash with outstanding horticultural and fresh market attributes. The semi bush style allows for higher planting density and thus higher yields, and the oblong 1 - 1.5 kg fruit turn canary yellow at harvest, and the internals show traditional spaghetti squash "noodles" with rich nutty flavour.

Vegesgetti ^{F1}

DISEASE KEY DEFINITIONS

HR: Highly resistant plant varieties would highly restrict the growth and development of the specified pest or pathogen under normal growing conditions and pest pressure when compared to susceptible varieties. These plant varieties may, however, exhibit some symptoms or damage under heavy pest pressure or stressful growing conditions.

IR: Intermediately resistant plant varieties would restrict the growth and development of the specified pest or pathogen. The plant variety may however exhibit a greater range or degree of symptoms when compared to a highly resistant variety. Intermediately resistant plant varieties will still show less severe symptoms or disease damage than susceptible plant varieties when the crop is grown under similar environmental conditions and is subjected to the same disease or pest pressure.

ZYMV - Zucchini yellow mosaic virus
